About company

DEAXO was established by a tightly welded team of German engineers and technical experts, sharing the same values, with more than 20 years of solid background gained in industry's majors.

Initially based in Dresden (Germany) to serve the clients in the Silicon Saxony. Soon afterwards we have responded to the demands of the Russian high-tech industry and set up a legal entity.

Today DEAXO is an international operating company with more than 50 engineers working in several projects world wide.
